

Case Study 1: Flood monitoring using visual business intelligence

Since 2006, reinsurance broker Guy Carpenter has contracted with eCityRisk to provide flood and storm surge monitoring for their i-aXs Real Cat system. During this time, eCityRisk's real-world damage observations have provided re/insurers with an independent real-world check on model-based loss estimates for US and European events including the 2007 UK floods, the 2008 Mid-west floods and hurricane Gustav.

"eCityRisk's disaster response data and services provide a core input to Guy Carpenter's event tracking services", Dickie Whitaker, Managing Director, Guy Carpenter.
